

# Software Used in this Lab

In this lab, you will use [MySQL](#). MySQL is a Relational Database Management System (RDBMS) designed to efficiently store, manipulate, and retrieve data.

To complete this lab you will utilize MySQL relational database service available as part of IBM Skills Network Labs (SN Labs) Cloud IDE. SN Labs is a virtual lab environment used in this course.

## Database Used in this Lab

The database used in this lab is an internal database. You will be working on a sample HR database. This HR database schema consists of 5 tables called **EMPLOYEES**, **JOB\_HISTORY**, **JOBS**, **DEPARTMENTS** and **LOCATIONS**. Each table has a few rows of sample data. The following diagram shows the tables for the HR database:

SAMPLE HR DATABASE TABLES

## Objectives

After completing this lab, you will be able to use phpMyAdmin with MySQL to:

- Create a database.
- Create tables using SQL scripts
- Load data into tables

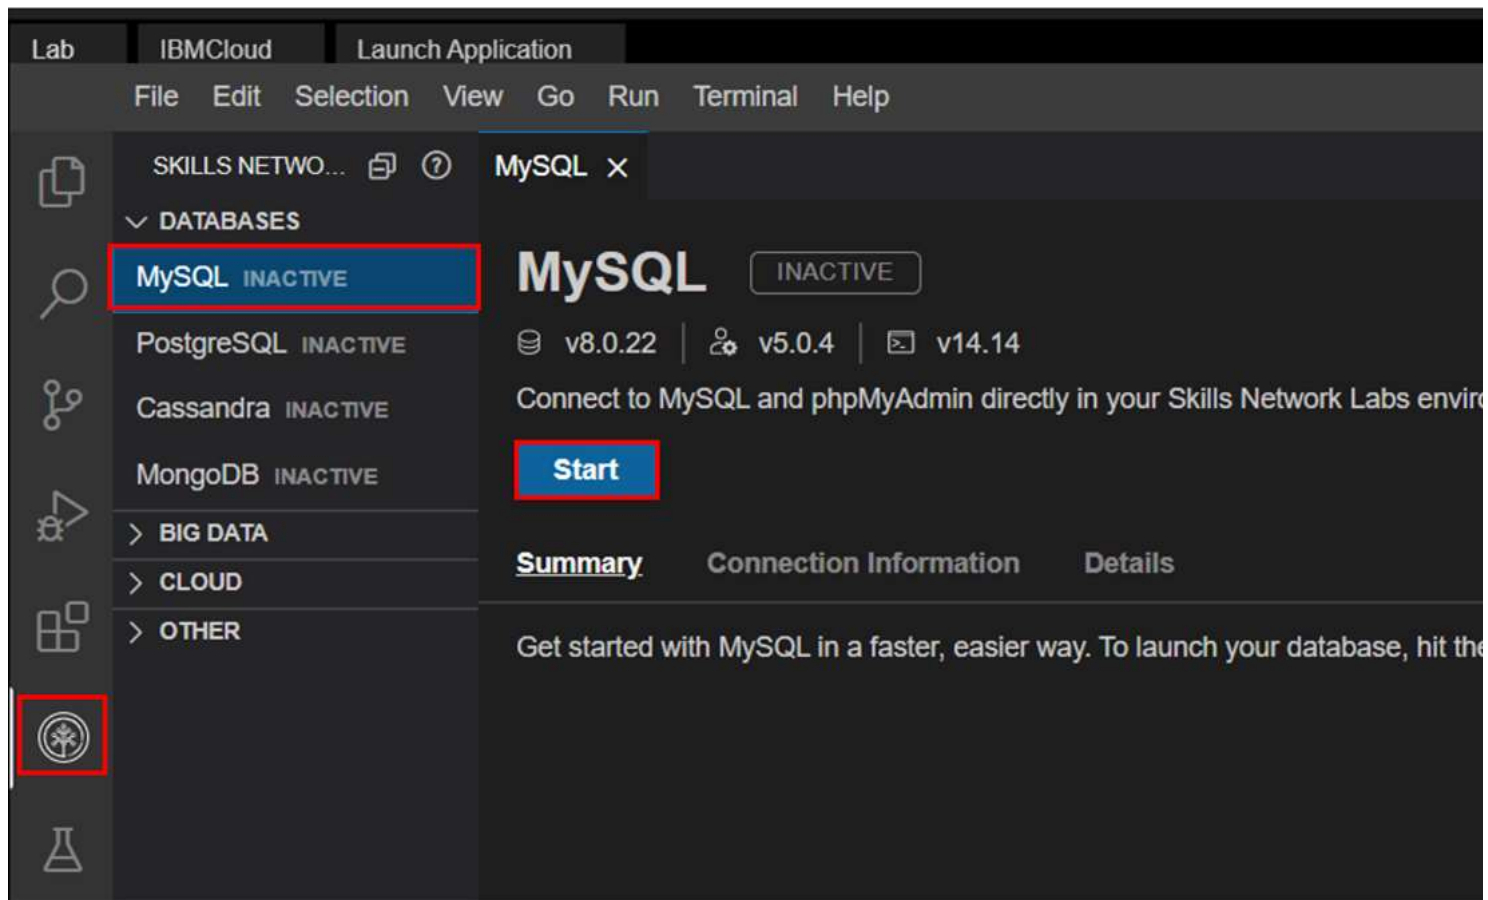

## Exercise

In this exercise through different tasks, you will learn how to create tables and load data in the MySQL database service using the phpMyAdmin graphical user interface (GUI) tool.

### Task A: Create a database

1. Click on **Skills Network Toolbox**. In **Database** section, click **MySQL**.

To start the MySQL click **Start**.

2. Once **MySQL** has started, click on **phpMyAdmin** button to open **phpMyAdmin** in the same window.

3. You will see the phpMyAdmin GUI tool.

4. In the tree-view, click **New** to create a new empty database. Then enter **HR** as the name of the database and click **Create**.

The encoding will be left as **utf8mb4\_0900\_ai\_ci**. UTF-8 is the most commonly used character encoding for content or data.

Proceed to Task B.

## Exercise 1: Create tables using SQL scripts

In this exercise, you will learn how to execute a script containing the CREATE TABLE commands for all the tables rather than create each table manually by typing the DDL commands in the SQL editor.

1. Download the script file to your computer:
  - [HR\\_Database\\_Create\\_Tables\\_Script.sql](#)
- Select the HR database. Later click on the Import tab.
- Click on **choose file**. Browse for the file and upload it .
- Later scroll down and click on **Go**.

## Importing into the database "HR"

**File to import:**

File may be compressed (gzip, bzip2, zip) or uncompressed.  
A compressed file's name must end in **[format].[compression]**. Example: **.sql.zip**

Browse your computer: **Choose File** HR\_Databa...es\_Script.sql (Max: 2,048KiB)

You may also drag and drop a file on any page.

Character set of the file: utf-8

**Partial import:**

☒ Allow the interruption of an import in case the script detects it is close to the PHP timeout limit. (This m

Skip this number of queries (for SQL) starting from the first one: 0

**Other options:**

☒ Enable foreign key checks

**Format:**

SQL

Console

- The script then gets imported successfully.

The screenshot displays the phpMyAdmin web interface. On the left, the 'Database: HR' is selected in the sidebar, showing a list of tables: DEPARTMENTS, EMPLOYEES, JOBS, JOB\_HISTORY, and LOCATIONS. The main panel shows the 'SQL' tab with a series of SQL queries and their results. The queries are: 1. 'Import has been successfully finished, 10 queries executed. (HR\_Database\_Create\_Tables\_Script.sql)' - A success message. 2. 'MySQL returned an empty result set (i.e. zero rows). (Query took 0.0033 seconds.)' - A success message. 3. 'DROP TABLE IF EXISTS EMPLOYEES' - A query that failed with the error: 'Note: #1051 Unknown table 'HR.EMPLOYEES''. 4. 'MySQL returned an empty result set (i.e. zero rows). (Query took 0.0024 seconds.)' - A success message. 5. 'DROP TABLE IF EXISTS JOB\_HISTORY' - A query that failed with the error: 'Note: #1051 Unknown table 'HR.JOB\_HISTORY''. 6. 'MySQL returned an empty result set (i.e. zero rows). (Query took 0.0051 seconds.)' - A success message. 7. 'DROP TABLE IF EXISTS JOBS' - A query that failed with the error: 'Note: #1051 Unknown table 'HR.JOBS''. 8. 'Console' - A query that failed with the error: 'returned an empty result set (i.e. zero rows) (Query took 0.0037 seconds.)'.

2	F_NAME	varchar(15)	utf8mb4_0900_ai_ci		No	None

Below the table structure, there are options to 'Check all', 'With selected:', 'Browse', 'Change', 'Drop', 'Primary', and 'u'. There are also buttons for 'Print', 'Move columns', and 'Normalize'. A section for 'Indexes' is visible at the bottom, showing a 'PRIMARY' index on 'EMP\_ID'.

## Exercise 2: Load data into tables

In this exercise, you will learn how data can be loaded into MySQL. You could manually insert each row into the table one by one, but that would take a long time. Instead, MySQL (and almost every other database) allows you to load data from .CSV files.

The steps below explain the process of loading data into the tables you created earlier in exercise 1.

1. Download the 5 .csv files below to your local computer:

- [Departments.csv](#)
- [Employees.csv](#)
- [Jobs.csv](#)
- [Locations.csv](#)
- [JobsHistory.csv](#)

To load each table do the following steps.

- Select each table .
- Click on Import tab.
- Select the **csv** file and click on **Go** to load the csv file.
